アプリにオフライン地図を内包

Swift+MapLibre+PMTilesで備えるフォールバック

2025.07.19
HAKATA.swift feat.Japan-\(region).swift #1

Satoshi Koda ec22s@GitHub, Conpass, Instagram

動機:

アプリに地図の最低保証を付けたい

どんな状況でも アプリが起動すれば 必ず表示できるビルトイン地図

> 基本はフォールバック 内容は簡易でよい ユーザが都度ダウンロードするオフライン地図とは別物

地図ライブラリ:

ビルトイン地図が普通にできるもの は無いけど

MapLibre Native for iOS

PMTiles

Working with PMTiles

Starting MapLibre iOS 6.10.0, using PMTiles as a data source is supported. You can prefix your vector tile source with pmtiles:// to load a PMTiles file. The rest of the URL continue with be https:// to load a remote PMTiles file, asset:// to load an asset or file:// to load a local PMTiles file.

Oliver Wipfli has made a style available that combines a Protomaps basemap togehter with Foursquare's POI dataset. It is available in the wipfli/foursquare-os-places-pmtiles repository on GitHub. The style to use is

https://raw.githubusercontent.com/wipfli/foursquare-os-places-pmtiles/refs/heads/main/style.json

The neat thing about this style is that it only uses PMTiles vector sources. PMTiles can be hosted with a relatively simple file server (or file hosting service) instead of a more complex specialized tile server.

デモアプリの動画

オフラインで開始

Appleマップを表示

デモアプリを表示,操作

途中でWi-Fiオンオフ切替

課題:

- 1 記号/文字のビルトイン
- 2地図データの後付け
- 3 メイン地図(オンライン)と一体化

どれも簡単ではなさそうだけどん

〔関連〕8月8~9日 福岡でオープンソースGISの九州初イベント開催!
